GRC PLUS B.V. keeps a record of laws, regulations and standards on governance, risk, compliance and cyber security, from the European Union to national laws in more than 40 countries: the national laws that put each act into effect, the supervisory authorities, dates and deadlines, fine caps and incident reporting periods. You can use it on this site, in the free tools, through the feeds and through the interface for AI assistants described below. These terms say how you may reuse it. Our Website Terms of Use apply to the rest of the site.

1 What you may do

- Read, quote and share what you find here, for your own work or your organisation's.
- Let an AI assistant or agent look things up for you, through the pages, their Markdown versions or the GRC+ MCP server.
- Download the tracker CSV files and subscribe to the calendar feed for your own use.
- Quote our data in articles, reports and presentations, with attribution.
- Use our public pages to train AI models; our robots.txt says so for AI crawlers.

2 Attribution

When you show or quote our data, name GRC+ as the source and link to the page it came from, for example: "Source: GRC+, grc.plus/regulation/nis2/". An AI assistant that answers from our data should give the same link.

3 What you may not do

- Sell our data, or include it in a product or service you sell, without our written agreement.
- Republish it in bulk: copy the record, a large part of it, or a whole dataset to another site, database or service.
- Build a copy of our database, or a substantial part of it, by any means, including many small queries.
- Scrape the site, the feeds, the API or the MCP server, or use automated means to collect our data faster or in greater volume than the limits below allow.
- Rotate or spread requests over several addresses, accounts or tools, or use any other way to get round the limits.
- Remove the attribution, or present our data as your own.

For any of these, write to us. We are glad to talk about licences for organisations that need more.

4 Limits

These limits apply to each address:

- 20 MCP or API calls a minute and 300 a day.
- At most 25 entries in an answer, and no paging past 100 results per query.
- One tracker CSV per act a day.

Above a limit the server answers 429, with the time to wait. We may block an address, or a client that breaks these terms or the limits, without notice. For higher limits, write to us.

5 Not legal advice

The data is general information, kept as current as we can and dated: each entry shows when we last checked it, and dates that are not yet confirmed are marked as expected or estimated. It is not legal advice and does not replace reading the law itself or advice on your situation. We give no guarantee that it is complete, correct or current and, to the extent the law allows, we are not liable for decisions made on it. This does not limit liability for our intent or gross negligence.

6 For AI assistants and developers

- **MCP server:** https://grc.plus/mcp, read-only, no sign-in. It looks up regulations, transposition status, authorities, deadlines, fine caps, incident reporting periods, the applicability checkers and recent updates.
- **JSON and OpenAPI:** https://grc.plus/wp-json/grc/v1/openapi.json
- **Summary for language models:** grc.plus/llms.txt. Every page is also available as Markdown by adding .md to its address.
- **Feeds:** the regulatory updates RSS feed per country, the calendar (.ics) and the tracker CSV per act.

We do not ask AI assistants to sign in, and the MCP server takes no personal data. To apply the limits we keep a keyed hash of the address of a call for up to a day, to count it, and nothing else. We count calls per tool and per day, without addresses.

7 Changes and law

We may update these terms; the date at the top shows the version that applies. Dutch law applies, and the court in Amsterdam has jurisdiction, unless mandatory law gives you another
